HEALTHCARE PRODUCT AND HEALTH SYSTEMS

SUMMARY

Five years of studying health systems taught me the language of healthcare; working inside hospitals taught me how the system behaves under pressure. I'm a UC Berkeley MPH candidate and hands-on product builder with experience across safety-net hospital operations, clinical informatics, regulatory readiness, and payer AI strategy. I ask relentless questions, learn systems quickly, map workflows, and find the bottleneck that matters. Then I turn what I learn into a working prototype and refine it with the people closest to the problem.

RELEVANT EXPERIENCE

Contra Costa Regional Medical Center | Contra Costa Health

Martinez, CA

Intern, Quality: Safety, Performance & Improvement (SPI) | MPH Practicum

Jun 2026 – Aug 2026

- **Product and customer discovery** — Embedded full-time in a public safety-net hospital, observing and interviewing staff across quality, nursing informatics, laboratory, operating room, finance, compliance, and administration to understand how work actually moved through the hospital, where it stalled, and why existing tools were or were not adopted.
- **Ebola emergency operations** — Supported a state-directed readiness effort across five facilities by mapping patient-response and clinician-practice workflows and tracking PPE and site requirements. A critical supplier disruption exposed fragmented sourcing, limited inventory visibility, and slow multi-level approvals when the system had no time to spare.
- **Product opportunity and validation** — Traced emergency requests from free-text emails and paper records through manual relay and command-center tracking, then found the same documentation and inventory gaps in Vaccines for Children (VFC program) supplies and every-shift crash-cart checks. Connected the pattern to reimbursement, program-participation, and regulatory risk and used it to prototype a hospital supply workflow platform.
- **Regulatory readiness** — Supported California Department of Public Health survey visits and finding follow-up; audited approximately 100 laboratory personnel files for a Joint Commission survey and built a tissue-bank mock survey tracer for operating-room teams.
- **Workflow improvement** — Analyzed patient-experience and quality data to investigate wait-time and discharge-readiness gaps; translated policy and compliance requirements into a PolicyStat routing decision tree, competency tracking for approximately 116 credentialed providers, and a clinical informatics value deck for hospital leadership.

Blue Shield of California

Graduate Consultant, Agentic AI Strategy

Feb 2026 – May 2026

- Built a scoring model that narrowed more than 10 AI concepts to four priority use cases based on member value, feasibility, operational complexity, and implementation risk.
- Mapped workflows and dependencies across product, data, and operations teams for prior authorization, claims, and other payer processes; built a multimodal AI-agent prototype spanning question answering, document processing, and voice input.
- Presented implementation pathways, an operating-model roadmap, and success measures to director- and VP-level leaders.

Institute on Aging

Graduate Analyst, Enhanced Care Management Evaluation

Feb 2026 – May 2026

- Designed the RE-AIM evaluation plan and interview guides for a care-transitions pilot serving high utilizers and people with disabilities; led recruitment, accommodation planning, stakeholder coordination, and delivery tracking.

SELECTED PRODUCT PROJECTS

Health Canopy | Hospital Supply Workflow Prototype

2026

Solo design and development | React, TypeScript, Python, LLM agents

- Discovered product opportunity while tracking Ebola emergency-preparedness supplies across five facilities. A supplier disruption exposed limited inventory visibility, while urgent requests arrived as free-text emails that one manager manually relayed and later entered into a command-center tracker.
- Validated the pattern through discovery with Finance, nursing informatics, quality, and operations, finding the same fragmentation in Vaccines for Children inventory and mandatory crash-cart documentation.
- Shipped an end-to-end prototype combining structured intake and routing, inventory visibility, predictive tracking, and reorder recommendations. Framed adoption around faster coordination, better audit records, lower compliance exposure, and more disciplined resource use.

Provider Connect | Shared Patient Summary Prototype

2026

Solo design and development | React, TypeScript, Python, LLM agents

- Designed and shipped role-appropriate patient views and access controls to support multidisciplinary coordination without unnecessarily exposing sensitive information.
- Translated privacy and workflow constraints into a working interface, iterating on what each member of the care team needed to see and act on.

ADDITIONAL EXPERIENCE

Joshua Apte Research Group | UC Berkeley

Student Researcher

Mar 2025 – Aug 2025

- Coordinated mobile data collection and standardized field workflows across varied environments.
- Built structured datasets and used Python and R to identify time- and location-based performance patterns for stakeholder reporting.

Siloam Cancer Hospital

Health and Safety Intern

Jun 2024 – Aug 2024

- Conducted hospital-wide operational audits and tracked corrective actions across departments.
- Supported Joint Commission International accreditation by consolidating compliance data, reviewing bilingual documentation, and standardizing readiness workflows.

EDUCATION

University of California, Berkeley

Master of Public Health, Health Policy and Management | Expected Spring 2027 | GPA: 4.0/4.0

Bachelor of Arts, Public Health | Minor in Global Poverty and Practice

SKILLS

Product and healthcare: Product discovery, customer interviews, workflow mapping, rapid prototyping, hospital operations, clinical informatics, quality improvement, CDPH survey support, Joint Commission readiness, compliance workflow design

Technical and systems: React, TypeScript, Python, SQL, LLM agents, RLDatix, PolicyStat, NRC Health, spreadsheet modeling and analysis (Excel, Google Sheets), Epic workflow exposure

Training and methods: Lean Six Sigma Yellow Belt certification in progress, expected November 2026.
